

## TYPO3.Flow - Feature # 9536

<b>Status:</b>	Resolved	<b>Priority:</b>	Should have
<b>Author:</b>	Robert Lemke	<b>Category:</b>	Security
<b>Created:</b>	2010-08-31	<b>Assigned To:</b>	Robert Lemke
<b>Updated:</b>	2010-10-20	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Improve logging of security related events		
<b>Description</b>			
Security related actions and events should be logged into its own file / backend because			
1. they log data might be sensitive			
2. important information might drown in the amount of other messages			
Additionally I'd like to see some hint if a user logged in or was re-authenticated due to an active token found in the session.			

### Associated revisions

Revision 84bb2483 - 2010-09-02 13:28 - Robert Lemke

[+FEATURE] FLOW3 (Security): Security events are logged to own file and more verbosively

Aside from the FLOW3 system log - whose file name is now "System.log" - FLOW3 now writes security related log messages into its own log file called "Security.log".

Furthermore, the logging advices now report more detailed information about re-authentication and authentication redirects.
