<b>Sprint:</b>			
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>	hard		
<b>Subject:</b>	Improve speed of AOP proxy building / reflection		
<b>Description</b>			
<p>The process of AOP proxy building and the extensive use of reflection has slowed down FLOW3 immensely, especially in Development context.</p> <p>There are several possible measures to make it faster again - on the one hand in the proxy building mechanism itself, but also in the ReflectionService.</p> <p>The initialization of the AOP framework currently takes 96% of the overall script execution time (ie. 11,0145364 seconds in my test case).</p> <p>We should bring this below 2 seconds for the following scenario:</p> <ul style="list-style-type: none"><li>- TYPO3 base distribution</li><li>- one change in a single class (e.g. a controller)</li><li>- next hit should be below 2 secs.</li></ul>

#### Revision 962d2be2 - 2010-09-02 18:43 - Robert Lemke

[~TASK] FLOW3: Doubled speed of proxy building in Development context

Improved speed of `getInterfaceNamesImplementedByClass()` in the Reflection Service by using PHP's native function. Previously `array_search` was called more than 4,000,000 times in this method.

This is not a real solution, but at least a quick relief. We need to take more measures and do more profiling as outlined in the related issue.

Relates to: #9568

#### Revision 9c3a9dca - 2011-10-26 21:36 - Robert Lemke

[TASK] Optimized AOP Pointcut Filter matching

This change set greatly reduces compilation time for AOP proxies for applications intensively using AOP and security policies. It is a quick

fix rather than the ultimate solution.

Class name and method name matching have been simplified, matching against annotations does not support regular expressions any more (wasn't supported officially anyway) and the order of a few point cut expressions has been optimized.

[FEATURE] Optimize AOP proxy building

This simply makes AOP proxy building a lot faster.
