Updated:	2011-05-06	**Due date:**	
Has patch:			
Affected Flow version:			
Subject:	Code mismatch in "FormViewHelper.php"?!		
Description			

Hello,

I just found this code, after trying to figure out the PHP-Error

Fatal error: Call to a member function reset() on a non-object in
/[..]/typo3_src-4.4.2/typo3/sysext/fluid/Classes/ViewHelpers/FormViewHelper.php on line 167

Looking into that file there is the following code:

```
00165                $uriBuilder = $this->controllerContext->getUriBuilder();
00166                $formActionUri = $uriBuilder
00167                        ->reset()
00168                        ->setTargetPageUid($this->arguments['pageUid'])
00169                        ->setTargetPageType($this->arguments['pageType'])
```

Please note the missing variables in front of the class-functions "->" and the missing semicolon. I don't think this can be right - or I missed a change in the PHP-core allowing such things.

The problem appears after trying to use the "<f:form>[..]<f:/form>" tag in a fluid-template. Without using this tags, the template works just fine. So i think this is a bug.

That's correct, it's a chained method call.
